Education

2025–now **Bc. Computer Science, MFF UK, Prague**
(currently studying)

Experience

Vocational

2021–now **Pomocný pracovník planetária, iQLANDIA o.p.s., Liberec**
Working weekend program at the Planetarium in iQLANDIA, hosting live streams of interesting space events

Innovations:

- “Questionare” software package, allowing rapid engagement with the live stream audience through polls
- “StreamOverlay” software package, rendering overlays for rocket launch live streams
- “Remote Streaming” software package, collection of open source software that I organized to allow streaming from remote locations back to the studio
- “weatherman” streaming style, useful for covering rocket launches when you need to “point at stuff”

Interesting / innovative live streams that I worked on:

- “Částečné zatmění Slunce 25. 10. 2022” - experimental remote streaming
- “Astronomické události 2023/23” - live audience voting using YouTube chat
- “Astronomické události 2023/47” - anniversary broadcast
- “Den a noc na Jizerce 10. 8. 2024” - almost 12 hour continuous live stream
- “Pátý testovací let rakety Starship” - custom overlay system
- “Sedmý start starship // Starship IFT-7” - “weatherman” style of hosting, very useful for explaining things
- “Úplné zatmění Měsíce 7. 9. 2025” - live streaming from remote places
- “Měsíc zakrývá Plejády (12. 9. 2025)” - covering time sensitive events
- “Přímý přenos polární záře 19.01.2026” - rapid-response live streaming with zero prior notice

2021–now **IT support & Software development, GeoSolve s.r.o.**

- Developing specialized software for processing levelling measurements ⇒ allowed for quick results right at the site.
- Managing IT inside the company
- Managing company e-mail system
- Helping with geodetic surveying in Latin America

2021–now **Editor**, *AstroCrew YouTube channel*

Creating and editing space videos

- “Graduation thesis” describing my work on AstroCrew videos
- Series “Co nás čeká na obloze v roce ...?” - more than 1000 views
- Series “Astronomické desetiminutovky” - more than 1200 views
- “Stellarium Panorama Creator 3” - software for rendering visuals in AstroCrew videos.

Achievements

2026 **Winner of MFF GameJam**

The team of four that I lead managed to win the first game jam, that we participated in. We have used Godot with C# backend as the basis of our game. “*Blog post*” “*Announcement*”, “*Game page*”

Languages

Czech	Native
English	C1
German	A2

Skills

Advanced: C#, Java

Intermediate: Kotlin (Jetpack Compose), Python, Javascript

Experimenting: Rust, Kotlin (Multiplatform), C / C++, WASM-based sites

Tooling: L^AT_EX, OBS, CasparCG, MusicPlayerDaemon, Godot

Interests

Programming Mostly interesting tools that help with boring tasks or allow cool things to happen

Livestreaming Extended from my Programming interest, most interested in technology

Photography Currently experimenting with analog photography

Game development Experimenting with game development, mostly in game jam environments
